

## PEACE OF MIND FOR YOUR BOAT.

If you're ready to step up to a great boat, take a closer look below the water. The Zeus® Pod Propulsion System from Cummins MerCruiser Diesel features a revolutionary design that decreases your boat's vulnerability to collision and grounding while dramatically increasing performance. It all starts with tunnel mounting to reduce draft and protect the pod. The propellers are rear facing and guarded by a protective skeg. In the event of a significant grounding or collision, the skeg can shear away just below the keel providing additional clearance before the pod is impacted. In the unlikely event a large object enters the tunnel and strikes the pod, the integrated trim tab protects the bottom of the hull as the pod separates from the hull at the designed point, all while maintaining the watertight integrity of the hull.
